

Torch Instruction Sheet

Parts

Wick

Wick Holder

Snuffer Cap

(with chain
already attached)

Torch body

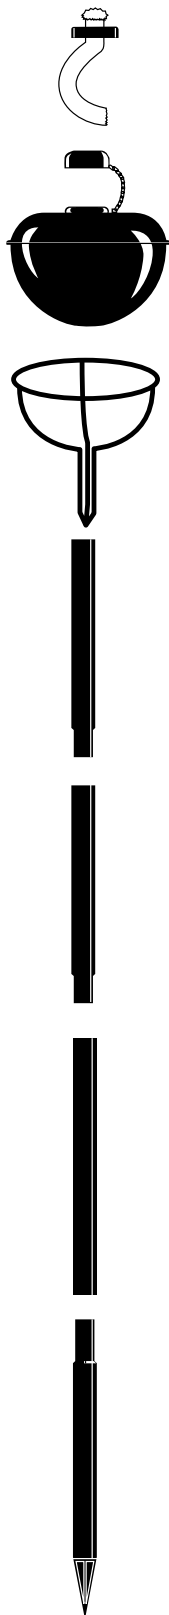

Wire Torch Holder

Fluted Post

Fluted Post

Base Post

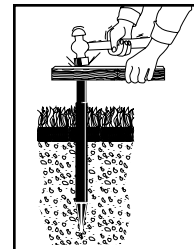

Ground Post

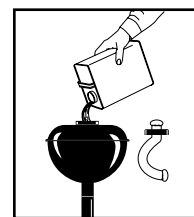

Before assembly, check to see that all parts are present.

Tools needed: hammer and a block of wood.

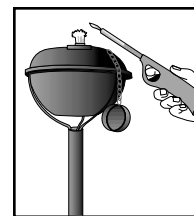

- 1) Using the block of wood as a buffer, hammer the pointed end of the ground post securely into the ground, leaving approximately 6 inches exposed above the ground.
- 2) Attach the base post (straight tube) to the secured ground post.
- 3) Attach the first fluted post, inserting the smaller end into the base post. Attach the second fluted post, inserting the smaller end into the first fluted post.
- 4) Insert the wire torch holder into the top fluted post.
- 5) Fill the torch with torch fuel, up to 1/2" below the top of the torch. Let the wick soak up fuel for 2 to 3 hours before lighting.
- 6) Place torch in wire torch holder.
- 7) Remove snuffer cap and light with a match or lighter.
- 8) Place snuffer cap over wick to extinguish flame.

Step 1

Step 5

Step 7

⚠ DANGER

Failure to follow Danger statements can cause a fire or explosion resulting in serious bodily injury or death, or damage to property.

⚠ DANGER

- ⚠ For outdoor use only.**
- ⚠ Use only commercially manufactured torch fuel and follow manufacturers directions for use and storage.**
- ⚠ Never use gasoline, alcohol or any volatile fuel.**
- ⚠ Keep children and pets away from the torch.**
- ⚠ The torch has an open flame, do not use near combustible materials.**
- ⚠ Never use the torch unless it is in the wire torch holder.**
- ⚠ Use only the snuffer cap to extinguish flame.**

Note: Keep snuffer cap on when torch is not in use to prevent contamination of fuel.
